

Darshan Dodia

Mumbai, India — +91 9326320634 — dodiadarshan7@gmail.com

Portfolio: Website ↗ — Github: Darshan-D ↗ — LinkedIn: Darshan Dodia ↗ — Medium: darshandodia ↗

SKILLS

Languages: Swift, Objective-C, Python, Java, Kotlin

Frameworks & Libraries: UIKit, SwiftUI, Combine, Core Data, Core Animation, XCTest, WidgetKit, Auto Layout

Tools & Workflows: Xcode, Xcode Instruments, Cursor, ClaudeCLI, Copilot CLI, Git, CI/CD (GitHub Actions), Jira

Architecture & Concepts: MVVM, MVC, VIPER, REST APIs, JSON Parsing, Memory Management, Concurrency, GCD, Async Await, Accessibility, GraphQL, Firebase, Server-Driven UI (SDUI)

EXPERIENCE

Raja Software Labs

iOS Developer

June 2022 - Present

Mumbai/Pune, Maharashtra

- **Key Project:** Flagship iOS app of LinkedIn ↗ with over 500 million downloads.
- **AI Assisted Coding:** Leveraged Cursor, Claude, and GitHub Copilot to map complex code flows, accelerate debugging, and generate boilerplate code and XCTest, thus increasing productivity by ~60%. Maintained strict quality standards by taking full ownership of AI outputs and rigorously reviewing, refining, and testing all generated logic prior to production.
- **High-Performance Tracking Architecture:** Engineered a robust viewport-visibility tracking module for ad analytics. Utilized background queues and async/await to prevent main thread blocking and memory leaks, driving a 30% increase in ad revenue and a 43% decrease in ad-related crashes.
- **Developed Widgets for LinkedIn Games:** Built daily automated state-refresh logic utilizing WidgetKit timelines, seamlessly synchronizing data between the main app and the extension to support 100K+ DAU with minimal edge-case failures while following Apple Human Interface Guidelines (HIG).
- **Resolved Critical Issues Proactively:** Utilized automated context indexers and AI debugging commands to swiftly identify and fix performance bottlenecks and a critical bug impacting over 250,000 users, ensuring application responsiveness.
- **Boosted User Engagement with Innovative Features:** Deployed LinkedIn Games, utilized by over 3 million users, driving a 20% increase in user retention and a 30% increase in session duration while spearheading a cross-functional team of 2 developers.
- **Server-Driven UI Migrations:** Led migration of 7 iOS screens to a scalable Server-Driven UI architecture. Integrated RESTful APIs and parsed dynamic JSON payloads into generic UIViews and native components, improving release velocity.
- **Experimentation & CI/CD:** Leveraged internal feature-flagging platforms to safely roll out A/B experiments. Safeguarded production by writing comprehensive Unit and UI tests (XCTest) integrated via CI/CD pipelines, reducing bug regressions by 80%.
- **Core iOS Technologies:** Worked extensively with UIKit, Core Animation, and Auto Layout for responsive UI design. Leveraged Combine for reactive data binding and managed App Store release updates.
- **Technical Mentorship & Standards:** Elevated team development velocity by defining and enforcing MVVM and Clean Architecture patterns, establishing strict PR review checklists, and coaching two junior engineers on structured debugging.
- **Hiring & Talent Acquisition:** Served as an interviewer during large-scale hiring drives, assessing 20+ candidates and contributing to the successful onboarding of 15+ engineers within a 6-month period.

PERSONAL PROJECTS

iOS Network Debugging Tool ↗

June 2025

- Identified the need for better network visibility during development cycles to monitor REST API calls.
- Developed a Swift-based in-app network debugger with live inspection and JSON-based API mocking, implemented via a custom URLProtocol and accessible through a simple UI overlay.
- Delivered a reusable tool that significantly improves debugging efficiency for network-dependent features.

CRED-Style Interactive Card Spread Animation ↗

Oct 2025

- Engineered a highly responsive, physics-driven card stack animation inspired by the CRED app, focusing on fluid transitions and natural user interactions using SwiftUI and Combine to handle reactive state changes.
- Implemented complex gesture tracking combined with dynamic geometry calculations to continuously update rotational angles and spatial offsets for each card in the stack.

EDUCATION

St Francis Institute of Technology, Grad. June 2022

B.E in Electronics and Telecommunications — Cum. CGPA: 9.23 / 10.0
